The patched-2 polypeptides are signalling molecules, specifically for signalling and mediator molecules in the hedgehog (hh) cascade which are involved in cell proliferation and differentiation. They can be used for the treatment of disorders which are mediated at also be used for treating degenerative disorders of the nervous system, e.g. Parkinson's disease, memory deficits, Alzheimer's disease, Lou dehrig's disease, Huntington's disease, schizophrenia, stroke and drug addiction. Patched-2 agonists can be used to treat gut diseases, bone diseases, shin diseases, diseases of the testis (including infertility) ulcers, lung diseases, diseases of the pancreas, diabetes, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MTRSPPLRELPPSYTPPARTAAPQILAGSLKAPLWLRAYFQGLLFSLGCGIQRHCGKVLF

The invention relates to an isolated sequence comprising a native human patched. 2 (Ptch-2) polypeptide. The invention also relates to signalling and mediator molecules in the hedgehog (Hh) cascade which are involved in cell proliferation and differentiation. The isolated sequence is useful for the treatment of disorders which are linked to Hedgehog, especially Desert hedgehog expression, such as testicular cancer. It may also be used as a hybridisation probe in a cDNA library to isolate Ptch-2 or its Hodgehog protein signalling. The present sequence is human patched-2 (Ptch-2) protein
                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The invention relates to a new isolated nucleic acid encoding a patched-2 biological activity, comprises DNA having at conjugation the sequence identity with a DNA molecule or its complement encoding: (a) a human patched-2 polypeptide comprising the sequence encoding: (a) a human patched-2 polypeptide comprising the sequence of BG74104; no. (b) the same mature polypeptide encoded by the cDNA (ATCC CC Deposit No. 209778 designation). Also included are a vector comprising the uncleic acid, a host cell transformed with the vector, a process for producing patched-2 polypeptide, a chimaeric molecule comprising the vertebrate patched-2 polypeptide, a chimaeric molecule comprising the vertebrate patched-2 polypeptide and a heterologous (a) sequence, an antagonist of patched-2 (that blocks, prevents, inhibite and/or neutralises the Descrit comprising of patched-2 that tsimulates or enhances the normal functioning of patched-2 that tsimulates or enhances the normal functioning of patched-2 and diagnosing to determine whether a particular disorder is modulated for antiferior or treating a disorder that is modulated by Dhh signalling e.g. tumour, basal cell carcinoma, neurodegenerative disorders, memory deficit, alzenier of disease, schizophrenia, stroke, drug addiction, gut companied of diseases, bone diseases, skin diseases, testicular diseases, ulcers, lung diseases, parched-2 may also be used to develop male contraceptives. The gene for Patched-2 is located on human chromosome 1p33-34. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LGLLAFGALALGLRMAIIETNLEQLWVEVGSRVSQELHYTKEKLGEEAAYTSQMLIQTAR 120
                                                            s acid, useful for manufacturing a medicament for diagnosing or disorder that is modulated by Desert hedgehog (Dhh) signaling

Claim 3; Page 73-77; 80pp; English.

This invention describes a novel recombinantly produced human patched-2 (ptc-2) polypeptide which has nootropic, neuroprotective, cardiant, cantifinamatory, antiparkinsonian and antiarthritic activity. The ptc-2 protein is a hedgehog receptor and is therefore capable of modulating hedgehog signalling, and so affect a number of hedgehog-mediated used to beloogical activities. The human patched-2 (ptc-2) protein can be used to screen for modulators, antagonists and agonists, which are likely to play an important role in the modulation of cellular proliferation and cantenance of, e.g. neuronal, testicular, osteogenic or chondrogenic transplanted tissue; for the treatment, prevention and/or reduction of for in vivo reformation of tissue; to improve grafting and morphology of transplanted tissue; for the treatment, prevention and/or reduction of the severity of neurological conditions deriving from: injury to the nervous system including traumatic injury, chemical injury, vasal injury and deficits (such as ischemia resulting from stroke), together with influding Alzheimer's diseases, chronic neurodegenerative diseases of the nervous system including Parkinson's disease, thronic neurodegenerations; and chronic lammunological diseases of the nervous system including Parkinson's disease, contended in the treatment of autiple sclerosis, ptc-2 therapeutics can also be used in the treatment of autiple sclerosis, ptc-2 therapeutics can also be used in the treatment of autiple sclerosis, ptc-2 therapeutics can also be used in the treatment of susue, e.g. to treat tachycardia or atrial cardiac arrhythmias.

Chacken and be used to rescue neurons from lesion-induced death as well as should ear nutritional deferentiation, in diseases such CNS treams infarction, in diseases such CNS treams and each or served mutrices as well as for treatment of chronic pain such or regeneration in diseases such CNS treams and each or served mutrices as well as for treatment of chronic pain mutrices as well as for treatment of chronic pains may b infection, metabolic disease, nutritional deficiency, toxic agents, and se on. ptc-2 therapeutics may also be used for the repair of central and peripheral nerve damage, for repair and regeneration of non-neuronal tissue, e.g. skeletal and cartilage tissue, e.g. in the treatment of osteogenesis, arthritis, bone fractures, hereditary disease, as well as spermatogenesis and as fertiliaty educates, and to induce spermatogenesis and as fertility enhancers. This sequence represents the human ptc-2 protein described in the invention

This protein is a splice variant encoded by the novel human patched 2 gene (PTCH2), which has been localised by radiation hybrid mapping to chromosome 1p32-35 with D1S211 and W11404 as closest flanking markers and with an estimated localisation 5.5 cR from D1S443. This region is often cost by LOH in various different tumour types, such as neuroblastoma, melanoma and breast and colon cancer. PTCH2 is a candidate for a tumour suppressor gene in this region. It is also a candidate gene for involvement in familial melanoma CMM1, modifiel clous for familial adenomatous polyposis hwom, and Michelin Tire Baby Syndrome. PTCH2 is capable of participating in the human patched gene/Sonic hedgehog (PTCH7KHH) pathway during embryonic development and/or carcinogenesis. Cr hisolated human protein is useful as a medicament for the treatment of a condition involving tumours such as BCC (basal cell carcinoma). The nucleic acid is useful in gene therapy, and for use as a probe, primer or diagnostic agent. Note: This sequence was constructed using information from Figure 2B and the protein sequence given on pages 41-44 of the

This protein is encoded by the novel human patched 2 gene (PTCH2), which has been localised by radiation hybrid mapping to chromosome 1p32-35 with D1821 and WI1404 as closest flanking markers and with an estimated localisation 5.5 cR from D18443. This region is often lost by LOH in various different tumour types, such as neuroblastoma, melanoma and creat and colon cancer. PTCH2 is a candidate for a tumour suppressor gene in this region. It is also a candidate gene for involvement in familial melanoma CMM1, modifier locus for familial adenomatous polyposis hown and Michelin Tire Baby Syndrome. Splice variants of the PTCH2 gene exist (see AAA09082-84). PTCH2 is capable of participating in the human patched gene/Sonic hedgehog (PTCH/SHH) pathway during embryonic development and/or carcinogenesis. The isolated human protein is useful as a medicament for the treatment of a condition involving tumours such as a medicament for the treatment of a condition involving tumours such as a probe, primer or a diagnostic agent

This sequence represents a human patched receptor (Patched-2)

Colypeptide. Patched-2 polypeptides and polymucleotides are useful for diagnosing susceptibility to diseases by detecting mutations in the patched-2 gene and can diagnose diseases associated with Patched-2 cimbalance. Patched-2 polypeptides can be used to screen for agonists and antagonists which bind the polypeptide by detecting Patched-2 mRNA levels in ELISA assays. These can be used in treatment to activate (agonist) or inhibit (antagonist) Patched-2 activity. Patched-2 antibodies are useful for inducing an immune response to immunise and prevent diseases and for inhibit (antagonist) Patched-2 activity. Patched-2 activity or properties by patched-2 polypeptides can be administered directly or chromatography. Patched-2 polypeptides can be administered directly or can vaccine to incculate against disease. Diseases diagnosed, prevented or treated include cancer, kidney disease. Diseases diagnosed, prevented or inflammatory disorders and developmental disorders including Ptosis.

Contomosome, allowing gene inhexitance to be studied through linkage and malysis. Patched-2 polypucides may be useful in tissue localisation studies e.g. in situ hybridisations, to determine expression patterns and indicate normal functions of the polypeptide in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Patched-2 polypeptide and polynucleotide - useful as diagnostic reagents and for prevention and treatment of Alzheimer's disease, cancer
Patched-2; human; patched receptor; diagnosis; disease; screening; immune response; immunise; vaccine; inoculation; treatment; cancer; kidney diseases; cardiovascular disease; stroke; inflammatory disorder; neurological disorder; Alzheimer's disease; Ptosis; gene mapping; linkage analysis; tissue localisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

patched-2 (Ptch-2) polypeptide. The invention also relates to signalling and mediator molecules in the hedgehog (Hh) cascade which are involved in cell proliferation and differentiation. The isolated sequence is useful for the treatment of disorders which are linked to Hedgehog, especially Desert hedgehog expression, such as testicular cancer. It may also be used as a hybridisation probe in a cDNA library to isolate Ptch-2 or its homologues, and to diagnose whether a disorder is driven by Ptch-2 or Hedgehog protein signalling. The present sequence is mouse patched-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Patched-2 polypeptide and polynucleotide - useful as diagnostic reagents and for prevention and treatment of Alzheimer's disease, cancer

Patched-2 polypeptides and polymucleotides are useful for diagnosing succeptibility to diseases by detecting mutations in the Patched-2 gene and can diagnose diseases associated with Patched-2 imbalance. Patched-2 polypeptides can be used to screen for agonists and antagonists which bind the polypeptide by detecting Patched-2 mRNA levels in ELISA assays. These can be used in

treatment to activate (agonist) or inhibit (antagonist) Patched-2
activity. Patched-2 antibodies are useful for inducing an immune response
co immunise and prevent diseases and for isolating Patched-2 clones or
purifying the polypeptides by affinity chromatography. Patched-2
c polypeptides can be administered directly or as a vaccine to inoculate
against disease. Diseases diagnosed, prevented or treated include cancer,
kidney diseases, cardiovascular disease, stroke, inflammatory disorders,
c neurological disorders including Alzheimer's disease and mood disorders
and developmental disorders including Ptosis. The Patched-2 polypeptide
is also useful for mapping the gene to a chromosome, allowing gene
inheritance to be studied through linkage analysis. Patched-2
c inheritance to be studied through linkage analysis. Patched-2
c polymucleotides may be useful in tissue localisation studies e.g. in situ
hybridisations, to determine expression patterns and indicate normal
c functions of the polypeptide in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA01910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, namunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; cytokine; cell proliferation; cell differentiation; gene therapy, vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The invention discloses a composition comprising two or more isolated rat or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a fit to perform the method, an array, a method for identifying a nuclectide sequence that increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of the polynuclectide sequence the expression of a polynuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a compound of identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating
                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sednence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               fragment,

ö
pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (described in Table 3 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                      compound that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This is a nevoid basal cell carcinoma syndrome (NBCCS) (PTC) protein. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  encoding nucleic acid specifically hybridises, under stringent conditions, to a second nucleic acid consisting of a 6568 (full-length sequence), 1732 (exon 1a, b) (AAVI5998) or 659 (exon 2a) (AAVI5999) base pair sequence, in the presence of a human genomic library. The PTC polypeptide when presented as an antigen elicits the production of an antibody which specifically binds to a polypeptide encoded by the above three sequences. The NBCCS gene and its protein product, is a tumour suppressor, and is a homologue of the Drosophila PATCHED (PTC) gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Dean MF, Hahn H, Wicking C, Christiansen J, Zaphiropoulos PG;

Detection of the NBCCS nucleic acid, in particular abnormal sequences, by hybridisation assays is useful for detecting a predisposition to NBCCS or to a basal call carcinoma (also known as Gorlin syndrome). Alternatively, detection is of the polypeptide and is carried out by immunoassay.

Coronarian this nucleic acid can be used to treat NBCCS. The PTC perform an includes one or more mutations, chosen from Exon-5 693insC, Exon-17 298deal8bp, Exon-13 353dealG, Exon-22 G4302T, Exon-12 171insC, Exon-12 1639insA, E

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mouse patched protein (PTC) (AAR94380) was identified as the product of a cDNA clone (AAT14218) derived from mouse limb bud. It has about 38% identical amino acids to Drosophila PTC. PTC protein has been proposed as a receptor for hedgehog protein on basis of genetic experiments in flies. Murine PTC protein can be obtd. in large amounts by expression of the cDNA clone in transformed host cells. It can be used to screen for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding patched protein other than Drosophila patched protein – used to produce antibodies which detect or inhibit patched protein ligand
